

Supplementary material

Table 1. Estimated impact of bypass of patients with out-of-hospital cardiac arrest (OHCA) due to pulseless electrical activity or shockable rhythm with sustained return of spontaneous circulation (ROSC)

Survival to hospital discharge (propensity score matched groups)		Number needed to treat	Mean number of additional admissions
CAC 204/776 (26.3%)	Non-CAC 170/776 (21.9%)	23 for one additional survivor	35 – 48 per CAC per year
OR 1.58 (95% CI 1.15 – 2.27)			
<i>CAC=Cardiac Arrest centre, OR=Odd's ratio based on Vopelius-Feldt et al.</i> ¹⁹
