

**Table 1:** Studies of Prognostic Impact of Coronary Artery Disease on Patients Undergoing TAVI

Study	Recruitment Period (Year)	Inclusion Criteria	Sample Size (n)	Demographics	Results
Dewey et al. <sup>30</sup>	2005 to 2008	<p>Transapical</p> <ul style="list-style-type: none"> <li>· Age ≥70</li> <li>· STS &gt;15%</li> <li>· Surgically inoperable</li> </ul> <p>Transfemoral</p> <ul style="list-style-type: none"> <li>· EuroSCORE &gt;20%</li> <li>· STS &gt;10%</li> </ul>	201	<p>CAD group</p> <ul style="list-style-type: none"> <li>· Mean age 84.7 ± 5.4 years</li> <li>· Male 50.0%</li> <li>· DM 34.6%</li> <li>· HTN 88.5%</li> <li>· CVA 26.9%</li> </ul> <p>Non-CAD group</p> <ul style="list-style-type: none"> <li>· Mean age 83.1 ± 4 years</li> <li>· Male 55.6%</li> <li>· DM 44.4%</li> <li>· HTN 66.7%</li> <li>· CVA 33.3%</li> </ul>	<p>Mortality higher in patients with CAD than without (35.7 versus 18.4%, p=0.01).</p> <p>On logistic regression, presence of CAD has OR 10.1 (2.1–174.8, p=0.009) for 30-day mortality.</p>
Masson et al. <sup>31</sup>	2005 to 2007	<ul style="list-style-type: none"> <li>· All patients who underwent success TAVI.</li> <li>· Not candidates for surgical AVR on review of two surgeons.</li> </ul>	136	<ul style="list-style-type: none"> <li>· Mean age 85.1 years</li> <li>· Male 50.7%</li> <li>· BMI 24.4</li> <li>· DM 25.7%</li> <li>· HTN 64.7%</li> <li>· CVA 19.1%</li> </ul>	<p>No difference in 30-day mortality between groups with CAD and without (p=0.56).</p> <p>One year survival 77.9% (95% CL: 70.9, 84.9) with no difference between groups (p=0.63).</p>
Gautier et al. <sup>32</sup>	2006 to 2009	<ul style="list-style-type: none"> <li>· EuroSCORE &gt;20%</li> <li>· STS &gt;10%</li> <li>· Contraindication to surgery</li> </ul>	240	<ul style="list-style-type: none"> <li>· Mean age 82 ± 8 years</li> <li>· Male 54.8%</li> </ul>	<p>No difference in 30-day mortality between CAD group and non-CAD group (10 versus 15%, p=0.37).</p> <p>No difference in 1-year mortality between CAD group and non-CAD group (23.6 versus 29.4%, p=0.28).</p>
Italian TAVI registry (Ussia et al.) <sup>33</sup>	2007 to 2009	<ul style="list-style-type: none"> <li>· All patients undergoing TAVI in 14 centres across Italy</li> </ul>	663	<ul style="list-style-type: none"> <li>· Mean age 81.2±5.8 years</li> <li>· Male 44%</li> </ul>	<p>No difference in 30-day mortality between CAD group and non-CAD group (6.0 versus 5.9%, adjust OR 0.78, 95%CI: 0.30–2.01, p=0.605).</p>

		<ul style="list-style-type: none"> <li>· Contraindication to surgical AVR by local heart team</li> </ul>		<ul style="list-style-type: none"> <li>· DM 26.3%</li> <li>· HTN 75.0%</li> <li>· CVA 7.3%</li> </ul>	<p>No difference in 30-day major adverse cerebrovascular and cardiac events between CAD group and non-CAD group (adjusted OR 0.77, 95% CI: 0.29 to 1.72, p=0.449).</p> <p>No difference in 1-year mortality between CAD group and non-CAD group (14.5 versus 15.9%, HR 0.74, 95% CI 0.40–1.36, p=0.331).</p> <p>No difference in 1-year major adverse cerebrovascular and cardiac events between CAD group and non-CAD group (15.7 versus 18.3%, adjusted HR 0.76, 95% CI: 0.42 to 1.36, p=0.353).</p>
German TAVI registry (Abdel-Wahab et al.) <sup>34</sup>	2009 to 2010	<ul style="list-style-type: none"> <li>· EuroSCORE ≥20%</li> <li>· EuroSCORE &lt;20% and liver cirrhosis, chronic pulmonary disease or porcelain aorta.</li> </ul>	1382	<p>CAD group</p> <ul style="list-style-type: none"> <li>· Mean age 81.5 ± 6.1 years</li> <li>· Male 49.4%</li> <li>· BMI 26.4 ± 5.8</li> <li>· DM 36.9%</li> <li>· CVA 9.1%</li> </ul> <p>Non-CAD group</p> <ul style="list-style-type: none"> <li>· Mean age 82.1 ± 6.3 years</li> <li>· Male 30.0%</li> <li>· BMI 27.8 ± 14.3</li> <li>· DM 31.2%</li> <li>· CVA 6.1%</li> </ul>	In-hospital mortality higher in patients with CAD compared with patients without (10.0 versus 5.5%, OR 1.90, 95% CI: 1.23–2.93, p<0.01), not significant after adjustment for confounders (adjusted OR 1.41, 95% CI 0.85–2.33, p=0.18)

the UK. TAVI registry (Snow et al.) <sup>35</sup>	2007 to 2011	· All patients undergoing TAVI in 31 THE UK centres	2588	<ul style="list-style-type: none"> <li>· Mean age 81.31 ± 7.57 years</li> <li>· Male 36.3%</li> <li>· BMI 26.85</li> <li>· DM 22.2%</li> <li>· CVA 17.5%</li> </ul>	<p>Presence of CAD not found to predict increased HR for 30-day mortality (HR 1.18, 95% CI: 0.83–1.66, p=0.36).</p> <p>Presence of CAD not found to predict increased HR for 1 year mortality (HR 1.18, 95% CI: 0.96–1.45, p=0.122).</p> <p>Presence of CAD predicted increased HR for 4 year mortality on univariate analysis (HR 1.20, 95% CI: 1.03–1.39, p=0.02) but not in multivariate analysis (HR 1.14, 95% CI: 0.97–1.35, p=0.10).</p>
Matta et al. <sup>36</sup>	2016 to 2020	· Consecutive patients referred for TAVI at Toulouse University Hospital	1336	<ul style="list-style-type: none"> <li>· Mean age 84.3 ± 7 years</li> <li>· Male 45.2%</li> <li>· BMI 26.2 ± 5</li> <li>· DM 74.4%</li> <li>· HTN 68.7%</li> <li>· CVA 10.7%</li> </ul>	No difference in in-hospital mortality between CAD group and non-CAD group (3 versus 2.6%, p=0.72). No increase in odds of death on multivariate logistic regression for CAD group against non-CAD group (OR 2.28, 95% CI: 0.73–7.1).
Bern TAVI registry (Franzone et al.) <sup>37</sup>	2007 to 2013	· All patients undergoing TAVI in Bern	744	<p>CAD group</p> <ul style="list-style-type: none"> <li>· Mean age 82.1 ± 5.6 years</li> <li>· Male 37.9%</li> <li>· BMI 26.1 ± 4.7</li> <li>· DM 33.5%</li> <li>· HTN 89.5%</li> <li>· CVA 10.5%</li> </ul> <p>Non-CAD group</p> <ul style="list-style-type: none"> <li>· Mean age 81.9 ± 5.7 years</li> <li>· Male 37.9%</li> <li>· BMI 26.3 ± 5.4</li> <li>· DM 24.2%</li> </ul>	<p>No difference for 30-day mortality between CAD and non-CAD group (4.4 versus 4%, HR 1.12, 95% CI: 0.47–2.63, p=0.80).</p> <p>No difference for 1 year mortality between CAD and non-CAD group (16.6 versus 12.5%, HR 1.35, 95% CI: 0.85–2.15, p=0.21).</p> <p>Increased 1 year death, CVA or myocardial infarction between CAD and non-CAD group (16.8 versus 9.8%, HR 1.75, 95% CI 1.06 – 2.89, p=0.030).</p>

				<ul style="list-style-type: none"> <li>· HTN 77.8%</li> <li>· CVA 7.3%</li> </ul>	
--	--	--	--	---	--

AVR = aortic valve replacement; BMI = body mass index; CAD = coronary artery disease; CI = confidence interval; CVA = cerebrovascular accident; DM = diabetes mellitus; HR = hazard ratio; HTN = hypertension; OR = odds ratio; TAVI = transcatheter aortic valve intervention.
